Q1: Write a complete program to read two numbers from a user and find their sum. (Hint: use 3 variables of the same data type i.e. int)

Sample input/output:

Enter first number: 12

Enter second number: 10

Sum of the two given numbers is : 22

Q2: Write a program to find average of five numbers.

(Hint: use different data types for different variables and observe the changes in the output)
